Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).						
Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) bove, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any parned patent term adjustment. See 37 CFR 1.704(b).

Continuation of 11. does NOT place the application in condition for allowance because: With regard to Applicant's arguments, prosecution on the merits is closed. Applicant's arguments against the Bornzin et al., U.S. Patent 5,549,650 reference are a repeat of Applicant's arguments in the REMARKS that were filed on 04 May 2006. Examiner responded to Applicant's arguments in the Office Action mailed on 11 October 2006, but Applicant has not addressed the Examiner response. Consequently, Examiner repeats the response herein below as stated in said Office Action. Additionally, Applicant's statements pertaining to the specification are moot because, although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). For example, "transient" is a relative term and, although the Bornzin et al. test may take about a day to do the test, it is still a transient period over a year interval and no amount of time is listed in the claims as to how long the tests take. Similarly, stating that Bornzin et al. utilize a large number of cardiac beats to determine the cardiac performance for a particular combination of control parameters is irrelevant because the claim limitations do not list an amount of data. Consequently, Bornzin et al. teaches the claimed limitations as set forth in the present application.

As stated in the Office Action mailed on 11 October 2006, Examiner respectfully disagrees with Applicant's argument that Bornzin et al. do not disclose or suggest estimating optimal control parameters for maximizing cardiac performance based on the values representative of transient cardiac performance as recited in claim 1 of the present application. Bornzin et al. disclose the claimed limitation at column 5, lines 5–12 and column 19, line 36–column 21, line 30 as stated in the Office Action mailed on 07 February 2006. Specifically, the estimating step is shown as averaged/average functions of the processor, 28 in column 20 lines, 53–65 and column 21, lines 4–30 where the estimated (averaged) optimal control parameters are HRsubOPT, AVsubOPT and PsubOPT as described in the function of the processor, 28. Further, the processor provides the information it gathers from the values representative of transient cardiac performance (AV, HR) to maximize cardiac performance as described in the cited Bornzin et al. references herein above, and as recited in claim 1 of the present application.
